

# THOMSON-EFCIS

## Integrated Circuits

### TBA820

#### AF AMPLIFIER

The TBA820 is a monolithic integrated audio power amplifier.  
Its main features:

- working with supply voltages from 3 to 16 volts,
  - low idle current (4 mA typ.),
  - high efficiency,
- make it especially suitable for mobile, battery operated equipments.

Other features include:

- output power up to 2W without any external heat sink,
- high input impedance, low bias current,
- high ripple rejection,
- no thermal runaway,
- no cross-over distortion,
- few external components required.

The TBA820 is supplied in a quad-in-line, 14 leads package.
